

Brand guidelines

VERSION 1.0

AUGUST 2026

Chop Shop is clipping and editing software for creators. The identity is built on one idea: two slabs knocked out of alignment. A cut, abstracted. Everything below exists so that idea survives contact with a 32px app icon, a dark timeline, and a thousand thumbnails.

01 Logo

PRIMARY · STACKED

The default. Use it everywhere there is vertical room: site header, splash, deck covers, print.

SECONDARY · HORIZONTAL

For short, wide spaces: app top bars, email signatures, sponsor strips.

ON DARK

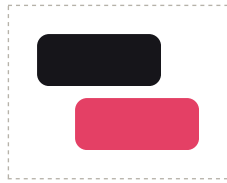

On dark, the top slab goes paper and the accent lifts one step to Chop Red Light so it holds its weight.

MARK ALONE

The mark carries the brand alone once the name is established: avatars, loading states, watermark corners.

CONSTRUCTION

slab = 78×33 (ratio 2.36:1)

gap = 9 ($0.27 \times \text{height}$)

offset = 24 ($0.31 \times \text{width}$)

radius = 8 ($0.24 \times \text{height}$)

clear space = 1 slab height

Scale the whole mark; never re-derive the offset by eye. The offset always runs right, never left.

APP ICON · FOUR SIZES

The icon inverts: accent field, ink slab on top, paper slab below. Below 24px, drop to the single-colour fallback.

MISUSE

DON'T OFFSET LEFT

DON'T ROTATE

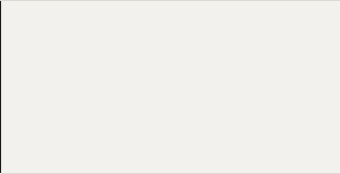

DON'T RECOLOUR

DON'T STRETCH

02 Colour

Two neutrals do the work; the accent is a punctuation mark, not a surface. As a rule, accent covers under 10% of any screen, with the app icon and primary buttons as the deliberate exceptions.

			
Ink #16151A oklch(0.21 0.01 300) Type, slabs, dark UI ground	Paper #F2F1EE oklch(0.96 0.004 85) Light ground, knockout slab	Chop Red oklch(0.62 0.2 12) ≈ #EF3A5C Accent on light, icon field	Chop Red Light oklch(0.7 0.19 12) ≈ #FF6076 Accent on ink only
 Grey 700 #57545C	 Grey 500 #8B8880	 Grey 200 #DCD9D2	 Ink Raised #242229

03 Typography

Archivo Black DISPLAY ONLY Logo, hero statements, big numbers. Uppercase, tracking -0.04em. Never below 24px, never for body.	CUT IT DOWN
Sora INTERFACE · BODY 400 body, 500 UI labels, 600 headings, 700 titles. Tracking -0.02em above 24px, 0 below.	Trim, caption, publish Sora carries every screen of the product and most of the marketing. Warm enough to read long, geometric enough to sit beside the mark.
IBM Plex Mono DATA · LABELS Timecode, durations, file names, eyebrow labels, keyboard hints. Uppercase labels track 0.16em.	00:04:12:08 → 00:04:19:22 EXPORT QUEUE · 3 CLIPS

Border 1px #DCD9D2

04 In product

The editor lives on ink so footage reads true. Chrome recedes; accent marks only the thing the creator is acting on right now — the playhead, the selected clip, the primary action.

ACCENT RULES

One accent element per view carries priority. If two things are red, neither is.

MOTION

The mark animates one way: slabs slide apart along x, 180ms, cubic-bezier(0.2,0,0,1). Loading loops it; nothing else moves.

WATERMARK

Exported video: mark only, paper at 70% opacity, bottom-right, inset 4% of frame height.

05 Voice

WE SOUND LIKE

Short. Verb-first. Specific about time. A tool talking to someone mid-edit at 1am, not a brand talking to a market.

"Trimmed 4 clips. 2:18 saved."

"Split at playhead - %K"

"Export started. About 40s."

WE NEVER SOUND LIKE

Hyped, vague, or congratulatory. No exclamation marks in the product. No "magic", "effortless", "unleash". No emoji.

~~"Your edit is looking amazing!"~~

~~"Let AI work its magic"~~

~~"Unleash your creativity"~~
